Module Code & Module Title

CS6004NI– Application Development

Assessment Weightage & Type

30% of Individual Coursework

Year and Semester

2022-Autumn Semester

Student Name: Punam Thapa Magar

London Met ID: 20048968

College ID: np01cp4s210273

Assignment Due Date: 5th January 2023

Assignment Submission Date: 5th January 2023

Word Count: 1505

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and marks of zero will be awarded.

1. Introduction

This is the first coursework from the "Application Development" module that we had to finish. By using Visual Studio 2022, the software is completed. This course's main goal is to design and construct a C# desktop application that will assist a bike repair shop in keeping track of their stock and inventory. Additionally, each stock item's details must be recorded in this application along with staff members' names and the dates that each item was "authorized by and taken by." The admin should also be the only person with access to the stock or inventory as they are the only ones with the authority to approve the addition of things to the stock or to remove items from the stock.

In all sincerity, the application includes a login system, a feature for adding items to the inventory, a way to save and retrieve information about each addition and removal, and a table for keeping track of the items that have been taken from the inventory each month. This table should include columns for the item, the quantity taken out, the person who approved the withdrawal, the date it was made, and the person who approved the withdrawal. The admin can also store and retrieve the addition and removal of each item's details from the inventory, which can only be done between 9 am and 4 pm, five days a week, and import the record of the service center from the "CSV file" or "JSON file" for the bulk data input (from Monday to Friday). Items without a time or date constraint can be added to the inventory by the administrator. Based on how many of each item have been removed, the application presents a bar graph of those objects.

2. Detailed instructions to run the program

2.1. Program execution and Logging in:

The desktop application's first appearance is depicted in the figure below. It is the Bike Service Centre login page. When the user enters the correct username and password to log in, the system opens the home page. Logging in as administrator will allow the user to edit the items, quantity, remove and approve users' withdrawal items as well as see the reports. Logging in as a user will allow the user to add items and withdraw items in a specific time.

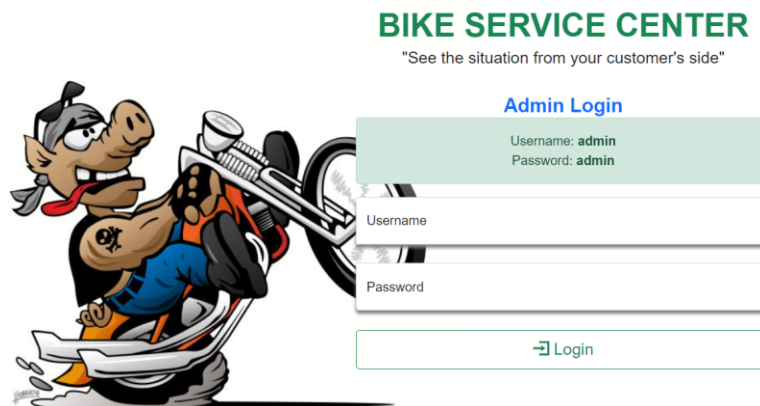

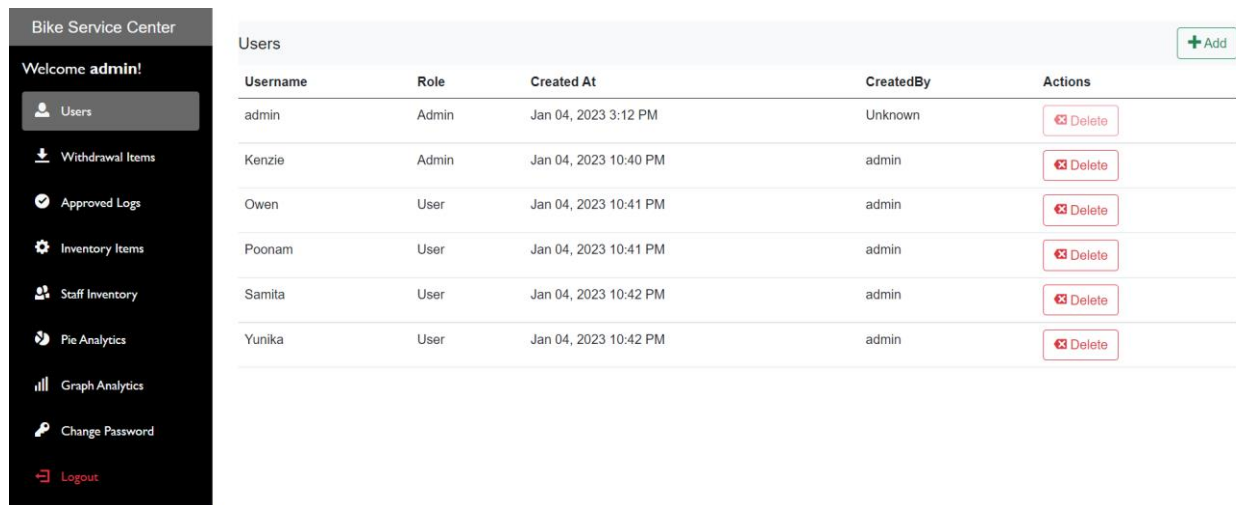

Figure 1 Login Prompt

2.2. Logging in as administrator

The default username for administrator is “admin” and the default password is also “admin”

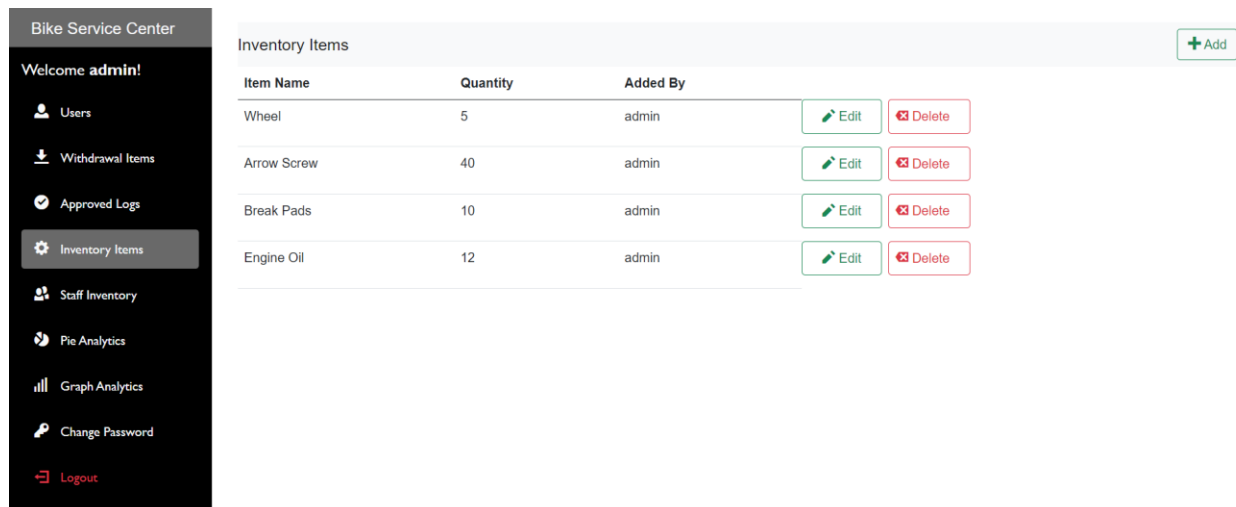

This below is the main page of the system which can only be accessed after login to the system which includes the details of inventory items, users, approved log, staff inventory and so on.

The screenshot shows the 'Bike Service Center' admin interface. On the left is a dark sidebar with a 'Welcome admin!' message and a list of menu items: Users, Withdrawal Items, Approved Logs, Inventory Items, Staff Inventory, Pie Analytics, Graph Analytics, Change Password, and Logout. The main content area is titled 'Users' and features a table with columns: Username, Role, Created At, CreatedBy, and Actions. There are 7 users listed, each with a 'Delete' button. An '+ Add' button is in the top right corner.

Username	Role	Created At	CreatedBy	Actions
admin	Admin	Jan 04, 2023 3:12 PM	Unknown	Delete
Kenzie	Admin	Jan 04, 2023 10:40 PM	admin	Delete
Owen	User	Jan 04, 2023 10:41 PM	admin	Delete
Poonam	User	Jan 04, 2023 10:41 PM	admin	Delete
Samita	User	Jan 04, 2023 10:42 PM	admin	Delete
Yuniika	User	Jan 04, 2023 10:42 PM	admin	Delete

Figure 2 Admin Panel

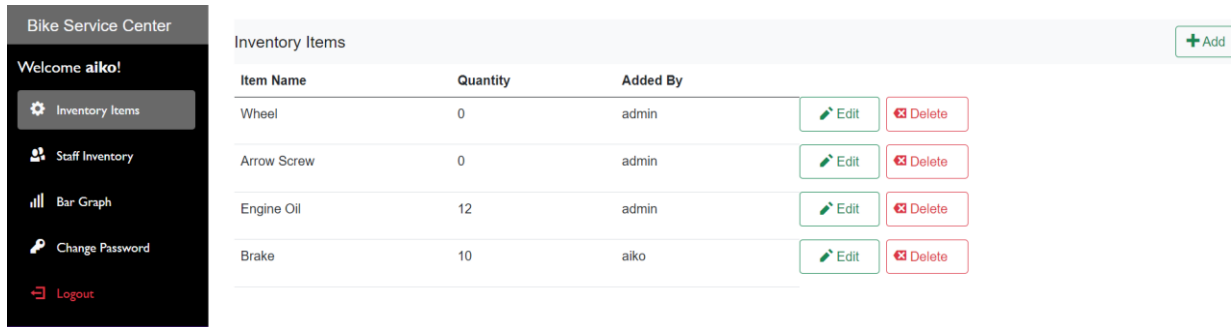

The screenshot shows the 'Bike Service Center' admin interface with the 'Inventory Items' table selected. The sidebar is identical to the previous screenshot, but the 'Inventory Items' menu item is highlighted. The main content area is titled 'Inventory Items' and features a table with columns: Item Name, Quantity, Added By, Edit, and Delete. There are 4 items listed: Wheel, Arrow Screw, Break Pads, and Engine Oil. Each item has an 'Edit' button and a 'Delete' button. An '+ Add' button is in the top right corner.

Item Name	Quantity	Added By	Edit	Delete
Wheel	5	admin	Edit	Delete
Arrow Screw	40	admin	Edit	Delete
Break Pads	10	admin	Edit	Delete
Engine Oil	12	admin	Edit	Delete

Figure 3 Inventory Items for Admin Panel

2.3. Logging in as a user

Logging in as a user will allow the user to view the inventory items and withdraw the items.

The screenshot shows the 'Bike Service Center' user interface. On the left is a dark sidebar with a 'Welcome aiko!' message and navigation links: 'Inventory Items' (selected), 'Staff Inventory', 'Bar Graph', 'Change Password', and 'Logout'. The main content area is titled 'Inventory Items' and features a '+ Add' button in the top right. Below the title is a table with columns 'Item Name', 'Quantity', and 'Added By'. Each row has 'Edit' and 'Delete' buttons.

Item Name	Quantity	Added By	Edit	Delete
Wheel	0	admin	Edit	Delete
Arrow Screw	0	admin	Edit	Delete
Engine Oil	12	admin	Edit	Delete
Brake	10	aiko	Edit	Delete

Figure 4 User Panel

2.4. Withdrawable Items form Inventory list by staff

The screenshot shows the 'Bike Service Center' user interface. On the left is a dark sidebar with a 'Welcome aiko!' message and navigation links: 'Inventory Items', 'Staff Inventory' (selected), 'Bar Graph', 'Change Password', and 'Logout'. The main content area is titled 'Staff Inventory' and features a table with columns 'Item Name' and 'Quantity'. Each row has a 'Withdraw' button.

Item Name	Quantity	Withdraw
Engine Oil	12	Withdraw
Brake	10	Withdraw
Wheel	10	Withdraw
Helmet	2	Withdraw

2.7. Change Password for users

The screenshot shows the 'Bike Service Center' application interface. On the left is a dark sidebar with a menu: 'Welcome admin!', 'Users', 'Withdrawal Items', 'Approved Logs', 'Inventory Items', 'Staff Inventory', 'Bar Graph', 'Change Password' (highlighted), and 'Logout'. The main content area has a header 'Change Password' and a form. The form contains a red warning message: '⚠ You are making use of the default password. Please change it.' Below this are two input fields: 'Current Password' and 'New Password'. At the bottom is a green 'Submit' button with a checkmark icon.

Figure 11 Change Password Form

This screenshot shows the same 'Change Password' form, but with user 'aiko'. The 'Current Password' field is filled with four dots. The 'New Password' field is also filled with four dots and has a blue border. A red error message is displayed below the fields: '⚠ New password must be different from current password.' The 'Submit' button remains at the bottom.

3. Class Description

The detailed description of the classes is described below:

Class Name	Description of Class
class Utility	It is a utility class that is in charge of adding the data for the items in a text file.
class Login	This class contains the user interface and login features, enabling user interaction and application-based login information input. User must enter username and password in login class.
Class Users	This class includes both the user interface and the capability for adding users to the system.
Class Items	This class includes both the user interface and the ability to add items to the system.
Class Inventory Items	This class contains the user interface and the ability to add inventory items to the system.
Class Approved Log	After receiving admin clearance, the functionality pulls data from the items.
Class Withdrawal Item	The items that are withdrawn from the inventory of the bike service are displayed in this class.

Class Change Password	The login page is displayed to users in this class once they have changed their passwords.
Class Logout	The logic for exiting a system or application is represented by the user-defined class known as the Logout class.

Table 1 Class Description

4. Method Description

The detailed description of the methods is described below:

Method Name	Returns	Description
_globalState	GlobalState	The field is initialized by a constructor, and a method called "GlobalState" returns the value of the current user.
_users	List<User>	In addition to adding additional behavior when the fields are accessed or modified, this enables us to regulate how the fields are accessed and modified.
_showAddUserDialog	bool	Displays the Boolean value true once users have confirmed their additions.
_showDeleteUserDialog	bool	Displays the Boolean value true for users following deletion confirmation.
_addUserErrorMessage	string	When the Boolean value is false, an error message is sent after the user has confirmed their additions.
_deleteUserErrorMessage	string	Displays error message when the Boolean value is false after the

		confirmation of deletion for users.
_deleteUser	User	Delete the user and remove the data.
_username	string	Addition of the details of users in a table after passing the string value.
_password	string	Change password and save data after passing the string value.
_role	Role	Differentiates the role of users and admin.

Table 2 Method Description

5. Algorithm

5.1. Hashing Algorithm

Hashing (also known as hash functions) in cryptography is a process of mapping a binary string of an arbitrary length to a small binary string of a fixed length, known as a hash value, a has code, or a hash. Hash functions are a common way to protect secure data such as passwords and digital signatures (ImmortalCoder, 2015). Since the hashing technique offers a more flexible and safe way of retrieving data than any other data structure, it was chosen for this project. Furthermore, hashed passwords can't be changed, taken, or put in danger. There isn't a well-known and effective key or encryption method that can be abused. A hash code cannot be used anywhere else, thus there is no need to worry if it is stolen (geeksforgeeks, 2022).

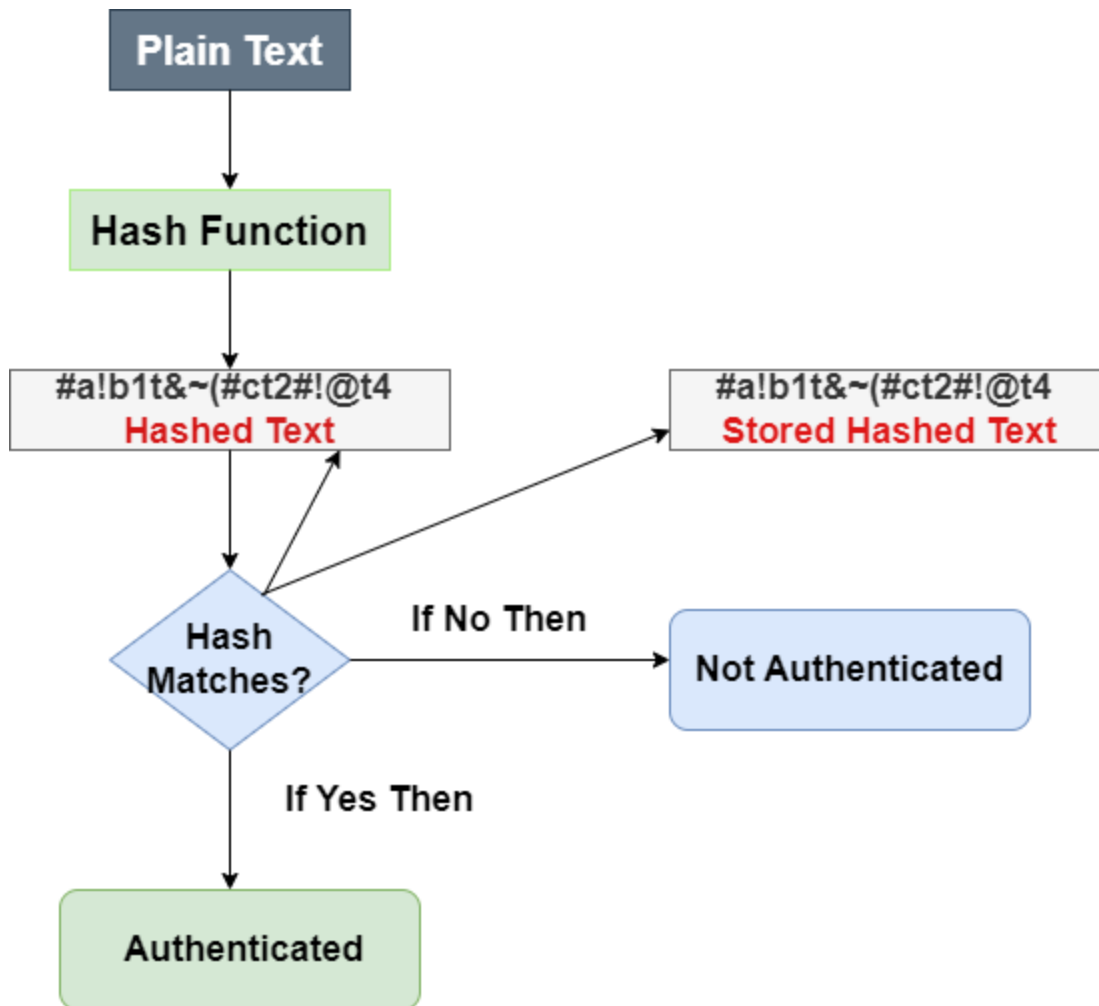

Figure 16 Flowchart example of Hash Work

6. Flowchart

A flowchart is a graphically representation of the structure of process or system, algorithm or the step-by-step solution of the problem. The Flowchart describes the flow of data through an information processing system and the parts of the flows (ConceptDraw, 2023).

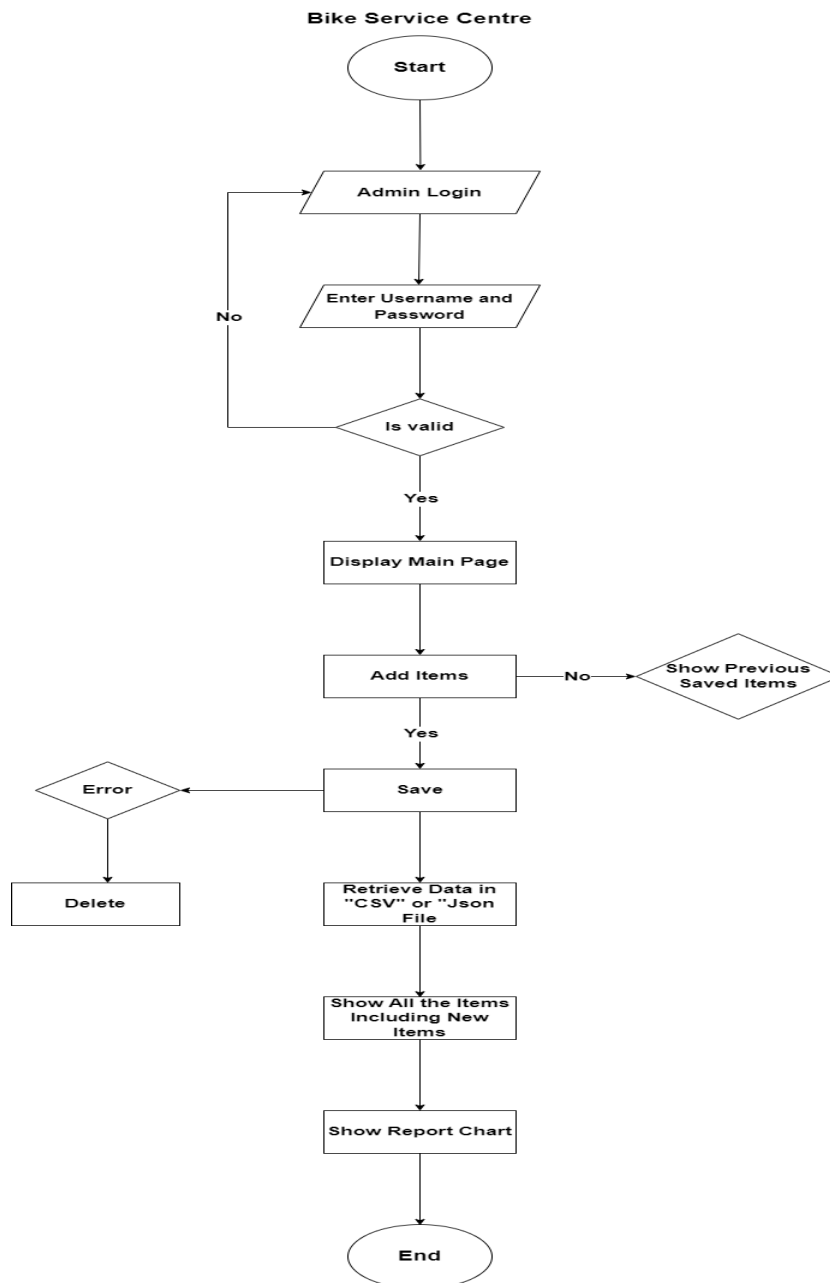

Figure 17 Flowchart

7. Reflection of own experience of using C# and Visual Studio for the development task

As a whole, Programming has advanced quickly as the globe entered a new decade. There are numerous programming languages and IDEs to choose from, each with unique advantages and capabilities. There are benefits and drawbacks to creating applications in C# and Visual Studio. However, it is without a doubt among the best programming languages and IDEs I have ever used. Although C# syntax is straightforward and simple to learn, it is also tremendously expressive.

While doing the development task of this coursework I needed to confront the challenged particular in the coding segment as numerous mistakes occurred and as I was just average at coding too, I was exceptionally confounded at some point. I was likewise somewhat confused in regards to validating implementing the sorting algorithm, and Method Description. Yet in order to conquer the confusion and troubles, a lot of explores were finished with respect to the applicable topics. Cent percent exertion was given to finish the undertaking allocated in this topic. Research was done in regards to .Net Framework from the beginning and it was executed in this which helped a lot to achieve this task. Regular interaction with instructors, consistent exertion and a lot of explores, going through the lecture slides and surfing in the web assisted with acquiring sound information about C# and its purpose. I likewise, became more acquainted with about the various methods which are utilized in the program, I knew about various terms alongside their capabilities.

Despite the fact that it was challenging and troublesome from the outset, the coursework was finished on schedule and submitted on time as well. I had the chance to learn numerous new things and themes which I knew about. It was decent encounter to foster a program utilizing C# and it was enjoyable to chip away at this project as well.
